Farooque Shaikh

Full-Stack Developer | MERN Stack | AI-Powered Applications

Full-Stack Developer with 5+ years of experience building responsive web applications using React.js, Next.js, JavaScript, and TypeScript. Experienced in microfrontend architecture, reusable UI development, REST API integration, state management, and performance optimization. Works across frontend and backend layers with Node.js, Express.js, and databases, and has integrated AI capabilities using the Google Gemini API.

WORK EXPERIENCE

Fullstack Engineer

LTM

Jan 2026 - Present *Mumbai, India*

Responsibilities

- Develop dynamic web application features using React.js, Next.js, Redux Toolkit, React Query, and Node.js.
- Build and maintain reusable, responsive UI components and integrate REST APIs to support application workflows.
- Contribute across frontend and backend layers, coordinating API contracts and data handling between application components and services.
- Use Docker-based development workflows to support consistent local development and deployment processes.
- Selected project: Visit-view, a microfrontend application composed of Visit Events, Visit Search, and Reports modules; integrated APIs and AWS S3 workflows for visit history, report generation, and CSV downloads.

Frontend Developer

Periscope Technology

Feb 2025 - Jan 2026 *Mumbai, India*

Responsibilities

- Developed interactive web application features using React.js, Redux Toolkit, React Query, and TypeScript.
- Translated client requirements into responsive user interfaces and reusable components to improve consistency across screens.
- Built and maintained shared form controls, tables, cards, and other UI elements for data-heavy business workflows.
- Worked with Node.js services and REST APIs, integrating backend data into frontend workflows and handling application states.
- Used Docker-based development workflows and collaborated with team members to streamline feature integration and delivery.
- Selected project: Lead Management System (LMS), supporting lead workflows with reusable inputs, tables, cards, centralized Redux state, and React memoization to reduce unnecessary re-renders.

SKILLS

React.js | Next.js | JavaScript | TypeScript | HTML5 | CSS3 | Bootstrap | Tailwind CSS | Material UI | Redux Toolkit | Redux Thunk | React Query | Reusable Components | Node.js | Express.js | REST APIs | API Integration | MongoDB | PostgreSQL | AWS S3 | AWS ECR | Docker | Git | Bitbucket | Webpack Module Federation | Machine Learning Integration

PROJECT SUMMARY

Real-Time Logistics Dashboard

Responsibilities

- Designed a dashboard concept for exploring German postal-code and location data to support logistics-oriented workflows. The interface can let users search by postal code, view normalized location details, and inspect geographic information on a map, with API-driven results displayed in a structured dashboard.

Technologies & Tools

Next.js | TypeScript | Tailwind CSS | OpenPLZ API | Mapping APIs

Multilingual Business Website

Responsibilities

- Built a responsive business website with English and German content, reusable page sections, and animated visual elements. Organized shared layout components and translation dictionaries so text can be maintained independently for each language, while keeping navigation and page content consistent across locales.

Technologies & Tools

Next.js | TypeScript | Tailwind CSS | next-intl | Framer Motion | Swiper

Chat Application

Responsibilities

- Developed a chat application concept with message retrieval and real-time communication patterns. The frontend communicates with backend APIs for message data and can use Socket.IO events to keep conversations updated without requiring a manual page refresh.

Technologies & Tools

React.js | Node.js | Express.js | Socket.IO | Axios

Frontend Developer

Quantique Metadata

Feb 2024 - Feb 2025 *Mumbai, India*

Responsibilities

- Developed responsive web interfaces using React.js and maintained clean, reusable frontend code.
- Optimized UI performance and resolved application issues through debugging and testing.
- Contributed to an extended-warranty vehicle application, implementing interface features for vehicle or warranty registration, claim submission, and status tracking.

E-Commerce Application

Responsibilities

- Developed a responsive commerce interface with product listing and detail pages, category browsing, and a shopping cart. Used centralized client-side state to keep cart updates consistent between product cards and the cart view, and created reusable components for product presentation and common shopping interactions.

Technologies & Tools

Next.js | TypeScript | Zustand | Tailwind CSS

Visit-view Microfrontend Platform

Responsibilities

- Contributed to the Edobo e-commerce application, helping deliver frontend features for the product experience.
- Worked with application state and form workflows to keep user interactions consistent and maintainable.

Frontend Developer

Motion Identix India Pvt. Ltd.

Jul 2020 - Nov 2023 *Navi Mumbai, India*

Responsibilities

- Developed responsive websites and reusable React.js components based on client requirements.
- Enhanced existing websites for mobile responsiveness and implemented new features to improve usability and engagement.
- Integrated frontend functionality with APIs and maintained consistent UI behavior across pages.
- Migrated website files to AWS S3 to streamline asset storage and access.
- Worked on maintaining and improving existing website functionality while delivering requested enhancements.

EDUCATION

B.E. Computer Engineering
Pillai HOC College
Jan 2019
Diploma
Anjuman-I-Islam's Abdul Razzaq Kalsekar
Jan 2016

CERTIFICATIONS

React Developer Certification
Example Academy | 2025

LANGUAGES

English Hindi

- Implemented three independently developed React microfrontends—Visit Events, Visit Search, and Reports—within a larger application. Integrated REST APIs to retrieve visit history and search results, and connected AWS S3-based workflows for report generation and CSV downloads. The architecture separates functional modules while enabling them to work together as one application experience.

Technologies & Tools

React.js | Webpack Module Federation | Node.js | TypeScript | REST APIs | AWS S3

Lead Management System (LMS)

Responsibilities

- Built frontend workflows for a lead management system, with reusable forms, tables, and cards for handling lead-related business data. Used Redux for shared application state and applied React memoization techniques to reduce unnecessary component re-renders. The system context includes role-based workflows for teams managing and following up on leads.

Technologies & Tools

React.js | TypeScript | Redux | Redux Thunk | REST APIs

Extended Warranty Vehicles

Responsibilities

- Contributed frontend features for a vehicle extended-warranty application, including workflows associated with vehicle or warranty registration, claim submission, and claim-status tracking. Focused on form-driven UI interactions and presenting application data clearly to users.

Technologies & Tools

React.js | Redux | React Hook Form | REST APIs

Edobo E-Commerce Application

Responsibilities

- Contributed to frontend development for the Edobo e-commerce application, helping build and improve user-facing product experiences. The source resume names the project but does not specify its complete feature set, so this entry avoids claiming unverified checkout, payment, or order-management functionality.

Technologies & Tools

React.js | JavaScript | REST APIs
